## Detectable Cable Ties for The Food Industry

The metal detectable nylon cable tie is specifically designed for use in the food and pharmaceutical processing industries. A unique manufacturing process, involving the inclusion of a metallic pigment, enables even small 'cut-off' sections of the tie to be detected by standard equipment. Ideally suited for the installation of cabling in and around the manufacturing process. The cable ties do have a releasable function thus they can be reopened and reused.

### Features and benefits

Total metal dispersion throughout the tie.

Can be reopened and reused.

Supports quality processes around the production of food stuffs.

Blue colour most common for easy visual

Greatly reduces risk of contamination

Magnetic detectable (detection level depending on specific application).

### Information

Can support quality assurance in the production of food stuffs, for example HACCP.
